Main Idea 3 PS 2.6

Light is a form of energy. When light hits an object, some light is reflected. Reflected light changes direction and keeps moving in a straight line.

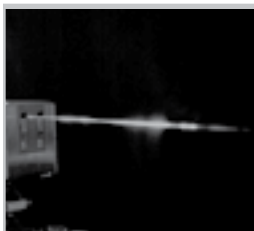

主題思想 3 PS 2.6

光是一種能量形式。當光照到物體時，某些光會反射。反射的光會改變方向並且繼續依照直線路徑行進。

Light is a **form of energy**. Some light energy is visible; some is invisible. (pp. 348–349)

光是一種**能量形式**。某些光源是可見的，某些則是不可見的。(第 348–349 頁)

Light travels in a **straight path**. The light that bounces off an object is a **reflection**. (pp. 350–351)

光會依照**直線路徑**行進。光從一個物體上彈回來，稱為**反射**。(第 350–351 頁)

If light hits a **smooth surface**, a clear image forms. Light that hits a **rough surface** scatters. (pp. 350–351)

如果光照到**平滑的表面**，就會形成清晰的影像。光照到**粗糙的表面**，會造成散射。(第 350–351 頁)
