

**English**

**Chinese**

**Main Idea**

Liquid water can evaporate and turn into water vapor. Water vapor in the air can form clouds, fog, rain, hail, sleet, or snow.

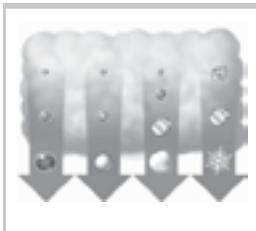

**主題思想**

液態的水會蒸發而轉變為水蒸氣。空氣中的水蒸氣會形成雲、霧、雨、冰雹、冰雨或雪。

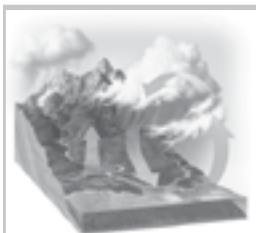

**Condensation** occurs when a gas changes into a liquid. **Evaporation** occurs when water changes from a liquid to a gas. (pp. 190-195)

當氣體轉變為液體時，會產生**冷凝**的現象。而當水從液態轉變為氣態時則會產生**蒸發**的現象。  
(第 190-195 頁)

**Precipitation** falls as rain, sleet, hail or snow. (pp. 196-197)

**降水**會以雨、冰雨、冰雹或雪的形式落下。(第 196-197 頁)

Water changes form and moves from place to place in the **water cycle**. (p. 198)

水會改變狀態並且在**水循環**中四處移動。(第 198 頁)
